Issue 3

Fuel Alternatives for Hitachi Construction Machinery

Please be advised that the use of GTL/CTL/BTL/HVO fuels has been approved for use in Hitachi Construction Equipment fitted with Isuzu, Deutz, Yanmar, Cummins, Daimler, and Hino engines.

Precautionary points

Other than the dynamic characteristics and fuel consumption characteristics, the fuels that meet the EN15940 standard have the same product guarantee as normal light fuels. (As the density is lower than that of EN590 diesel fuels, the dynamic characteristic and fuel consumption may also be lower)

If you have any doubt to your machine's compatibility, please call our Technical Department on 0191-430-8400.

For and on behalf of HCMUK

Derek Humphries
National Technical Manager
