

# FLEET FOCUS

## BOGMASTER EXCAVATORS!

Lynch operates a modern and reliable fleet of bogmasters, specialised excavators designed for work on soft, marshy, or boggy terrain.

These excavators are equipped with wider tracks that help distribute weight and prevent sinking. Any excavator weighing between **14 to 20 tons** can be converted into a bogmaster, increasing the standard track width from **700 mm to 1000-1300mm**.

All Lynch Bogmaster Excavators can be supplied with bio-oil and HVO fuel, which are non-toxic and biodegradable, making them safer for the environment and wildlife in case of spills.

These machines are ideal for sensitive sites with **wet ground, ecological restoration projects**, nature reserves, and SSSIs (Sites of Special Scientific Interest), as well as for locations with unstable ground conditions such as riverbanks and riverbeds.
