

FLEET FOCUS

SWIVEL TIP TRACKED DUMPERS

Lynch operates a modern and reliable fleet of Swivel Tip Tracked Dumpers, offering **180° rotation** allowing for loads to be tipped in any direction. This increases the efficiency of the machine and the productivity of the operator.

180° rotation optimises performance in narrow or tough-to-navigate areas as it negates the need for U-Turns and requires no space for directional changes. Low ground pressures make them ideal for working in environmentally sensitive areas.

All Lynch Swivel Tip Tracked Dumpers can be supplied with **bio-oil and HVO fuel**, which are non-toxic and biodegradable, making them safer for the environment and wildlife in case of spills.

These machines are ideal for sensitive sites with **wet ground, ecological restoration projects, nature reserves, and SSSIs (Sites of Special Scientific Interest)**, as well as for locations with unstable ground conditions such as riverbanks and riverbeds.
